

Advanced Security Practitioner

class 2 of 3

Designed for seasoned security specialists, this course enables learners to cement their expertise and develop skills in areas such as research, analysis and the integration of computing and communications in a business environment.

Omnikron's Advanced Security Practitioner is international, vendor neutral, and confirms that those who have earned it possess advanced-level security skills and knowledge.

After taking this course, students may elect to achieve the CASP certification which proves learner competency in enterprise security, risk management, research and analysis, as well as integrating computing, communications and business disciplines.

Prerequisites:

While there is no required prerequisite, this course is intended to follow Essentials of Cyber Security or equivalent experience and has a technical, hands-on focus at the enterprise level. This class is ideal for IT security professionals who have at least 5 years of experience in IT administration.

Who is this class for?

Security Architects, Penetration Tester/Ethical Hackers, and others looking to expand their technical security knowledge and further their careers in IT security.

What you will learn:

- Business continuity and disaster recovery planning
- Security operations, physical security, security architecture and design
- Software development security
- Telecommunications and network security
- Information security governance and risk management
- Legal, regulations, investigations and compliance

**This is 2 of 3 Security classes offered by Omnikron.
