Essentials of Cyber Security Class 1 of 3

Organizations are in Desperate Need of Security Rock Stars – Right Now and in Years to Come.

The future of IT security begins with education – and at Omnikron, we've developed a package of security courses designed to deliver the very latest in solution-focused security training. Cyber threats are escalating, and hackers show no signs of backing down. As hacking reaches new levels of sophistication, security specialists must rise to the challenge by mastering the latest tools, techniques and strategies for thwarting hackers and reducing the probability of massive security breaches.

Merely staying current with IT security issues isn't enough – Omnikron's security courses ensure you stay two steps ahead. They fully prepare you to recognize, identify and mitigate a wide range of security issues, vulnerabilities, potential cyber attacks and more – before disaster strikes and your organization's security is compromised.

Who is this class for?

This course is designed for IT Security Specialists, Risk Managers/Analysts, Security Architects, Penetration Tester/Ethical Hackers, and others looking to expand their technical security knowledge and further their careers in IT security.

PROTECTED

What you will learn:

- How to secure networks and respond proactively to security incidents of various types

- Master skills and strategies that will help you identify vulnerabilities, anticipate security risks and guard against breaches and hacks

- Understand security protection issues related to cloud computing, BYOD and SCADA, and many different mitigation and deterrent techniques

- You will also learn Access Control, identity management and cryptography; plus tools and strategies for business continuity and disaster recovery
