DevOps Foundation

Best Practices for Agile Organizations

Collaboration made easier.

DevOps is the cultural and professional movement that stresses communication, collaboration, integration and automation in order to improve the flow of work between software developers and IT operations professionals.

DevOps is an essential business process not just an IT capability.

It improves satisfaction among customers, suppliers, and partners, and increases returns by increasing the speed of innovation and implementation.

Demand for these skills is expected to remain high, in spite of – and because of – rapid changes in technologies.

Applying DevOps Methodologies results in:

- Faster design
- Faster deployment of apps
- Better operation of software and services

In this course, you will learn:

- DevOps methodology and how to incorporate it into your business
- How to build an effective development and deployment team

Who should attend these courses

- Aspiring DevOps Engineers
- Software supply chain managers
- Software developers and architects
- Enterprise Infrastructure Service Engineers
- Project managers
- Consultants
- Internal and external suppliers
- Process stakeholders

Four (4) sessions, 4 hours per session, 16 hours total

16 PDUs/16 Professional Education Hours offered for this class

Prepare to earn the DevOps Foundation Certificate
